mwLink Lighting Control Dashboard

A new cloud application for advanced networked lighting control solutions

Visualization, control and reporting for a wealth of operational data:

- Real time lighting network status and control
- Occupancy state and history
- Energy consumption state and history
- Grid connected services
- Fault detection and reporting
- Predictive maintenance capability reporting

A robust multi-platform lighting control application for today's and tomorrow's NLC systems, mwLink offers customizable feature sets so building owners and facility managers can include the features they want without the cost of features they don't need.

Future changes to lighting control networks can be easily integrated into the mwLink application so it grows with the system over time. Administrators can customize access for users from four different user types.
